Air dryer's ADT Plunger cleaning

PROBLEM

SOLUTION

- If the ADT of air dryer is open all the time and compressed air is continuously escaping

Plunger of the air dryer's auto-drain trap may get blocked due to particulate matter and get stuck. Hence it becomes necessary to clean the plunger from time to time

REQUIRED TOOLS

Allen key set, Screw driver, Clean and dry compressed air

ADVISORY

Turn off air dryer before conducting any service

Open the air dryer cover

Locate the auto drain
(Recommended: refer to the manual of air dryer)

Remove the cap

Using an allen key, open the auto drain

Remove the plunger and clean with compressed air

Re-fit the plunger back in position

- Fit the auto-drain back with allen key and screw

Put the air dryer cover back

- Put the air dryer back in to service
